COLORADO HEALTH ACCESS SURVEY

2025

Research File Data Dictionary

COLORADO **HEALTH** INSTITUTE

The 2025 Colorado Health Access Survey (CHAS) research file is a data file consisting of individual records from the 2025 CHAS. It is a free product provided by the Colorado Health Institute (CHI) to researchers and data analysts for use in health-related research. This document contains a complete data dictionary for the 2025 research file.

The research file can be used for statewide, urban-rural, and Health Statics Region (HSR) estimates. County and ZIP code data are available with an Institutional Review Board approval, but the data file is not designed to produce estimates at the county or ZIP code level. You must submit an application to gain access to the research file. The application is available at: https://www.coloradohealthinstitute.org/research/colorado-health-access-survey-2025

If you have questions or need help, please email us at chas@coloradohealthinstitute.org.

This document contains a complete list of the 2025 research file variables. Additional detail on these variables, including the corresponding survey question and response options, is also provided in this data dictionary.

Please note that for ease of reading, questions have been edited to be read in the second person. The respondent could be answering the survey on behalf of someone else in the household.

For example:

Original text: Question A8E. Why (haven't you/hasn't TARGET) had a telemedicine visit in the past 12 months? Indicate whether each statement applies to (you/TARGET).

Edited text: Question A8E. Why haven't you had a telemedicine visit in the past 12 months? Indicate whether each statement applies to you.

Administrative variables — such as the statistical weights required for analysis — are presented in **Table 1**. All other variables are presented in **Table 2** with their accompanying questionnaire text. New or modified items on the 2025 CHAS are highlighted. A survey respondent is the adult in the household age 18 and older who completed the survey. The target refers to a randomly selected household member about whom the respondent completes most of the survey. Sometimes the respondent and target are the same person.

Certain questions were only asked of respondents of the survey, such as sexual orientation. These variables require analysis with a separate weight than the overall survey sample. This weight is named **wgt_so**, and the variables that require its use are denoted in **Table 2**. The variable codebook is provided in **Appendix A**.

CHI recommends that anybody analyzing the research file use a statistical software that accounts for weighting and complex survey design, such as SAS 9.4 or R. CHI

also recommends consulting the questionnaire at the link above to define numerators and denominators for survey items incorporating skip patterns.

Table 1. Administrative Variables and Descriptions

Variable	Variable Description
ID	Target ID
WGT_POP	Final trimmed population weight for complete sample
WGT_SO	Final trimmed population weight for respondent sample

Table 2. Variables included in Colorado Health Access Survey Research File

Survey items highlighted in green denote a new or modified item on the 2025 survey. Items highlighted in purple denote variables that have been retired but are still available for analysis. Variables are presented in alphabetical order.

Demographic and geographic variables are grayed out, as they can be used to understand information on either the entire survey sample or the respondent-only sample. Demographic variables that require use of the respondent-only weight are denoted in the table. Survey items that have skip logic associated with the logic S10=1 designates that question as one that requires the wgt_so respondent-only weight for analysis. Please refer to the survey questionnaire when using the research file.

Variables contained in research file will differ based on request, as not all variables are available for every given survey year.
